# ARCHAEOLOGICAL RECONNAISSANCE IN NORTHERN INTERIOR DISTRICT OF MACKENZIE: 1969, 1970 AND 1972

DONALD W. CLARK

NATIONAL MUSEUMS OF CANADA

MUSÉES NATIONAUX DU CANADA

OTTAWA 1975

MhRs-1

Cabin Creek site

(4) Two short, thinned-back, snub-nosed end scrapers are illustrated in Plate 7 O-P.

(5) A retouched flake (Pl. 7 Q) was found near the next item.

✓ (6) A spherical blue glass bead (Pl. 10 G) has been burned.

Other scattered surface finds:

(7) MhRs-1:14 is a fragment of a biface knife or a large point.

(8) The single microblade (Pl. 10 E) is, regardless of its solitary occurrence, an unequivocal specimen.

(9) A cut piece of sheet brass or copper (Pl. 7 T) probably was intended for use as an implement.

(10) A small triangular fragment of iron (Pl. 7 U) is folded from metal apparently salvaged from a can.

(11) A centrally-perforated iron sheet disc (Pl. 7 V) was found in association with the last previous item.

(12) A bone button (Pl. 7 S) is similar to item No. 3.

Test collection:

A test excavation measuring 5 by 7 feet was made at the front edge of the site. Many weathered pinkish grey flakes were found here and this appeared to be one place on the site where there might be recovered more than dispersed superficial finds. However, the test largely exhausted the area within which apparent prehistoric material occurred within a soil context, and it produced (13) about 100 flakes (MhRs-1:9) but only two implements -- (14) a large rough biface fragment (Pl. 8 C) and (15) a delicately beveled sharp chert flake
